The TIP-MONT (Turn in Poachers Montana) program was established in 1985 to protect Montana's fish, wildlife, parks, and forest resources. This program gives you an opportunity to help protect these resources. If the information you provide leads to an arrest, you could be eligible for a cash reward up to \$1,000.

Yaak Mtn. Lookout

This 40' lookout, sits at an elevation of 4995' and has been used as an observation point for spotting fires since 1958. It is equipped with propane stove, refrigerator, heater and three mattresses. There is no indoor plumbing or fresh water supply. It is usually available June 1st thru October 1st., snow conditions permitting. Due to tower height we discourage bringing children.

Mt. Baldy-Buckhorn Ridge Lookout

This 26' lookout, sits at an elevation of 6529' and has been used as an observation point for spotting fires since 1910. It is equipped with propane stove, refrigerator, heater and three mattresses. There is no indoor plumbing or fresh water supply. It is usually available by July 1st thru October 1st., snow conditions permitting. Due to tower height we discourage bringing children.

Garver Mtn Lookout

This 40' lookout, sits at an elevation of 5874' and has been used as an observation point for spotting fires since 1929. It is equipped with a woodstove and two bunks with mattresses.

available by June 15th thru October 1st., snow conditions

There is no indoor plumbing or fresh water supply. Is is usually

permitting. Due to tower height we discourage bringing children.

Old Highway 2 - Interpretive Trail - Scenic Viewing

Kootenai River and Kootenai River Valley.

Old Highway 2 is a 2.3 mile hike along the old Highway route above the Kootenai River.

Interpretive signs and benches are located along the trail. Scenic view of the

Ross Creek Cedars – Giant Cedar Grove

open dates are May 20th to October 15th

The following acts are prohibited within the

Traveling or engaging in activities by more than 8 persons unless authorized by permit (36 CFR 261.58(f)).

Traveling or engaging in activities with more than 8 head of **stock** or more than one and one-half head of stock per person unless authorized by permit. A person traveling alone is permitted two head of stock (36 CFR 261.55(c)).

Building, maintaining, attending or using an open fire or campfire at Lower Geiger Lake (36 CFR 261.52(a)).

Camping overnight at Leigh Lake (36 CFR 261.58(a)).

Possessing or using a saddle pack or draft animal on Trail #132 to Leigh Lake; Trail #924 from Upper Wanless Lake (Lake 4) to main Wanless Lake; Trail #646 within the St. Paul Lake Basin, and within the Big Bear Lake Basin (36 CFR 261.55(c)).

The possession or storage of hay, grain, straw, cubes, pelletized feed or mulch that is not certified as being noxious weed seed free by an authorized State Department of Agriculture; each individual bale or container must be tagged or marked as weed free (CFR 261.58(t)).

Possessing or using a bicycle, wagon, cart, or other vehicle (including "game carts") (CRF 261.57(h)).

both, under authority of 16 USC 551.

Upper Ford Cabin

This rustic rangers cabin was built in the late 1920's, and is open

propane stove, refrigerator, heater, accommodations to sleep 7

year round for rental. This furnished cabin is equipped with

people and all the necessary kitchen furnishings to serve 8.

There is no indoor plumbing or fresh water supply.

Violations of these prohibitions are punishable by fine of not more than \$5000.00 or imprisonment for not more than 6 months or

Help Prevent Wildfires

Smokey Says:

NEVER leave your CAMPFIRE UNATTENDED. Make sure your CAMPFIRE is DEAD OUT before leaving it.

Please remember a SHOVEL and BUCKET are REQUIRED when using a CAMPFIRE

FIREWOOD PERMITS

Personal use firewood permits are available for purchase at any District office & must be in your possession when cutting firewood on National Forest lands. You are required to keep roadways clear of debris so others may safely pass. It is your responsibility to obey all fire prevention

A permit is NOT required for gathering small amounts of firewood for incidental use while

OHV LICENSE & REGISTRATION

All motorized users are responsible for knowing where, when and how they are authorized to travel on public lands. All motorized users should obtain the latest Motor Vehicle Use Map (MVUM) for National Forest System roads, trails and areas designated open to wheeled motorized use. All OHV's operated on forest and county roads **must** be street legal and OHV's on designated trails must have an OHV decal. Please contact the Three Rivers Ranger District for further details on motorized use.

NATIONAL FOREST STORE

The National Forest Store now offers secure on-line sales through our partner, the National Forest Foundation. You can purchase a map for any National Forest online at http://www.fs.fed.us/recreation/nationalforeststore/ or by calling 406-329-3024.

regulations and carry with you all required safety equipment.

camping or transporting wood back to your campsite.

treadightly!®

Travel and recreate with minimum impact. Respect the environment and the rights of others. Educate yourself plan and prepare before you go. Allow for future use of the outdoors by leaving it better than you found it. Discover the rewards of responsible recreation. For more information on Tread Lightly!, go to www.treadlightly.org or call 1-800-966-9900.

What can I do on National Forest Land?

Brochures and information on recreation opportunities, as well as rules and regulations specific to the Kootenai National Forest are available at all Forest Service offices.

Camping Stay Limits Camping in undeveloped or developed areas in excess of 14 days at any one campsite within any 30-day period, or leaving any equipment unattended for more than 24 hours is prohibited. Any camp relocated within a 5-mile radius shall be considered the same camp for day limit restrictions.

Campgrounds on the Kootenai National Forest will continue to be open as in previous years. Many have gates that will be closed at the end of the summer-fall recreation season, and not re-

opened until the next spring.

Wheeled motorized vehicle travel for camping is allowed within 300 feet of designated system routes as shown on the MVUM as long as: no new permanent routes are created; no damage to existing vegetation, soil or water resource occurs; travel off-route does not cross streams; or travel off-route does not cross riparian or wet areas.

Other Activities

Activities such as firewood gathering, mineral permits, and Christmas tree cutting are managed by a special permit system. If the permit does not specify that wheeled motor vehicles are allowed for that activity, then using a motor vehicle to carry out such activities is governed by the Motor Vehicle Use Map.

Firewood cutting is prohibited: within 100' of any running stream, pond, lake, marshy or wet area; in active timber sale units; in signed areas prohibiting it; on signed, tagged, or standing dead trees or down logs marked with paint.

Before burning MAY 1ST - SEPTEMBER 30th

Call the Three Rivers Ranger District at 295-7558 for a burn permit. You need a new permit

For current air quality restrictions call 1-800-225-6779 or check the Air Quality website at: www.smokemu.org . Click on Dispersion. Look under Burn Recommendations for Montana. Air Shed 1 is the air shed for Lincoln County.

Month	Burning Restrictions	Comments
January	No Burning Allowed	Air shed restrictions
February	No Burning Allowed	Air shed restrictions
March	Open Burning	Use caution when burning
April	Open Burning	Use caution when burning
May	Permit Required	Contact Troy Ranger District
June	Permit Required	Contact Troy Ranger District
July	Permit Required	Contact Troy Ranger District
August	Permit Required	Contact Troy Ranger District
September	Permit Required	Contact Troy Ranger District for permit and air shed restrictions
October	Permit May Be Required	Contact Troy Ranger District for permit and air shed restrictions
November	Open Burning	Contact Troy Ranger District for air shed restrictions
December	No Burning Allowed	Air shed restrictions

Don't burn when it's windy. Check the weather forecast for the next few days. Insure that you have equipment and personnel to control the fire. Dry fine fuel, like grass and pine needles burn and spread quickly.

Before you leave, put your fire out. Caution large materials (stumps, etc.) may burn for weeks and months.

YOU ARE RESPONSIBLE AND LIABLE IF YOUR FIRE ESCAPES

Why Are Noxious Weeds a Problem? Noxious weeds degrade the environment and wildlife habitat by reducing native forage, and other native plants. They also can increase soil erosion, and lower

water quality. Although many weeds are pretty, their negative effects on the environment and the economy are substantial. Because most noxious weeds have come from other countries, there are few, if any natural controls to keep weed populations from taking over once they get established.

What can you do to reduce the spread of weeds?

1) Keep your vehicle and recreation gear clean of weeds and seeds.

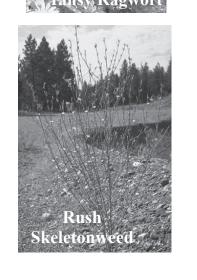

2) Don't drive through or park in weed patches. Weeds or their seeds can get caught in the undercarriage, grill. bumper or tires and transported to new locations. 3) Don't take vehicles behind locked gates, or off-road (this is illegal, too).

4) Use weed seed free feed for your stock. 5) Don't pick weed seeds off your clothes or pets and throw them on the ground. Dispose of them properly. 6) Don't pick weed "bouquets" and take them home or to your campsite.

Ranger District at (406) 295-4693

Please don't Spread Invasive Aquatic Weeds!

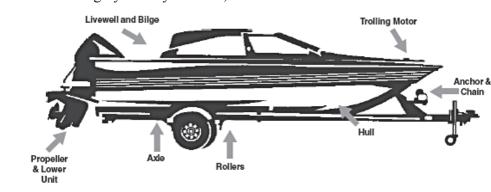

You may be helping the enemy...

Purple loosestrife, Eurasian watermilfoil and yellow flag iris are three invasive species that may be unknowingly transporting from one place to another. These harmful species can cling to boats, motors, waders, fishing equipment, and watercraft. Anything that touches the water has the potential to pick up these unwanted travelers.

Clean your gear to prevent their spread:

□ Wash all equipment and gear, use hot water if you can. Allow it to dry out. □ Drain your live well, transom, bilge and areas that might contain contaminated water.

☐ Thoroughly clean your boat, water craft and trailer.

A key factor in the plant's success is its ability to

underground runners. A single segment of stem and

Fragments clinging to boats and trailers can spread

the plant from lake to lake. Mechanical clearing of

weed beds for beaches, docks, and landings creates

the wind and current. Removing native vegetation

WHAT IS EURASIAN WATERMILFOIL?

extremely aggressive non-native aquatic weed once sold in this country as an aquarium plant. Its dense weed beds grow rapidly, choke native plants and spread easily to new areas. Watermilfoil currently It is a serious threat to our rivers and lakes.

Watermilfoil was accidentally introduced to North America from Europe. Its introduction westward into inland lakes and streams is primarily attributed to boats, with some spreading caused by water birds.

WHY IS IT A PROBLEM? Once introduced into a river or lake, watermilfoil

rapidly forms thick mats that severely hamper swimming, boating, and fishing. On some stretches of the Pend Oreille River in Washington, navigation and recreation have become virtually impossible. Watermilfoil has also caused drownings by tangling swimmers in the thick beds.

plant diversity, thus harming fish and wildlife habitat. Watermilfoil also invades fish spawning beds, clogs irrigation intake pipes, and hinders power generation. In nutrient-rich lakes, it can form thick underwater

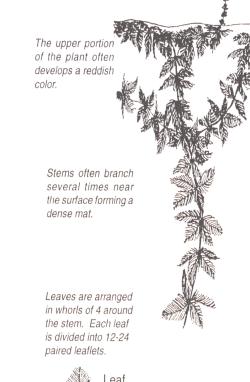

the water's surface. By midsummer it forms a "mat" so

How to identify eurasian milfoil.

water's surface.

Flower spikes from above

watermilfoil.

Each milfoil leaf is made up of pairs of small leaflets. A Eurasian watermilfoil leaf has 12 to 24 pairs of leaflets; a native leaf has only 6 to 9 pairs. The upper portion of the Eurasian watermilfoil plant often develops a reddish color. Eurasian watermilfoil has a finer, more feathery

Eurasian watermilfoil's leaves collapse around the stem when removed from water.

PREVENTION: Spread the word, not the weed. Pick off every fragment you find on your boat or trailer (put them in a garbage can). If you see Eurasian watermilfoil on someone else's boat or

lake can become infested by just one fragment.

hand pulling, bottom screening (using screens to block light from plants), and herbicide application. All of these methods have benefits and impacts, and can effectively manage populations of Eurasian watermilfoil. But management of this species is expensive, and eradication of this species once established is very unlikely. Prevention is the cheapest and most effective way to manage watermilfoil. ERADICATION AFTER INTRODUCTION IS

OTHER CONTROL METHODS: Other control

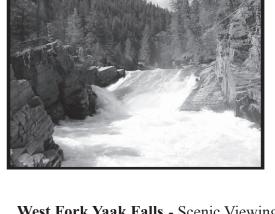

methods include mechanical harvesting or rotovation,

VIRTUALLY IMPOSSIBLE!!

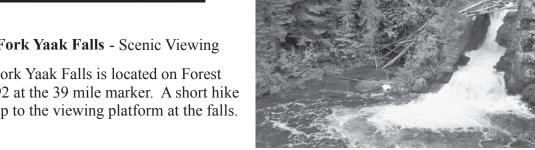

MILFOIL MAKES GREAT COMPOST Because milfoil is high in nutrients such as nitrogen,

phosphorus and calcium it makes good composting material. If milfoil is dried for 3 to 4 days, it can be mulched directly into the soil. TAKE CARE...even dried, milfoil will regenerate if re-introduced to

West Fork Yaak Falls - Scenic Viewing West Fork Yaak Falls is located on Forest Road 92 at the 39 mile marker. A short hike leads up to the viewing platform at the falls.

Callahan Interpretive Trail - Interpretive Trail - Scenic Viewing This trail is located 1.5 miles up Callahan Creek Road off of Highway 2 at the town of Troy. The trail runs along the old railroad grade that was used for mining and logging. Interpretive signs and benches are located along the trail.

Food Storage and Sanitation

Your safety is important! Proper food storage will help keep you and others safe by avoiding encounters with animals and preventing animals from being attracted to areas frequented by people.

All items that might attract animals should be stored where animals cannot access them at night and during the daytime. Someone should be physically present within 100 feet and in direct sight of the food.

These items must be properly stored: Human food,

(including canned food, soft drinks and alcoholic

beverages), harvested game animals, pet food, processed livestock feed and grains, and personal hygiene items such as soap, toothpaste and deodorants. This also includes garbage and empty food and beverage

containers.

Proper storage methods: Proper storage include placing food and other items in bear resistant containers □ hard-sided vehicles

 \Box suspending them at least 10

feet above the ground and 4 feet from any vertical support. **Bear resistant containers**: Bear resistant containers include the heavy metal boxes placed in campgrounds and other approved containers such as bear resistant horse

panniers and backpackers' containers that are certified

through the Interagency Grizzly Bear Committee Courtesy

NOTE: Plastic or metal food coolers. backpacks and leather or canvas horse panniers are

NOT bear resistant.

Inspection Program.

Eurasian watermilfoil (Myriophyllum spicatum) is an flourishes in Idaho, Washington and British Columbia.

Watermilfoil alters rivers and lakes by reducing natural

stands of tangled stems and vast mats of vegetation at dense it restricts swimming, boating and fishing. HOW DOES WATERMILFOIL GET STARTED?

Watermilfoil reproduces by a process called "fragmentation." Milfoil plants easily break into small pieces and each piece can form roots. A single wisp can multiply into 250 million new plants in one year. Milfoil is readily spread between lakes and rivers by boaters carrying plant fragments on their boats and

Control methods: Aside from herbicide treatments, other methods are successful, including harvesting, handpulling (try to contain fragments), rototilling (underwater tilling), installation of bottom barriers, and diver

trailer, help them clean off the pieces. Remember...a

WHAT CAN BE DONE ABOUT IT?
